

# 5A Angle Relations

Name: \_\_\_\_\_ Per: \_\_\_\_\_

SHOW YOUR WORK FOR FULL CREDIT. NO WORK, NO CREDIT. NO WORK IN PEN.

If the  $\angle 1 = 65^\circ$ ,  $\angle 2 = 25^\circ$ ,  $\angle 3 = 115^\circ$ , and  $\angle 4 = 115^\circ$ , fill in the following based on these measurements:

A. Complementary Angles B. Congruent Angles C. Supplementary Angles D. None of these

1.  $\angle 1$  and  $\angle 2$  are \_\_\_\_\_
2.  $\angle 1$  and  $\angle 3$  are \_\_\_\_\_
3.  $\angle 1$  and  $\angle 4$  are \_\_\_\_\_
4.  $\angle 2$  and  $\angle 3$  are \_\_\_\_\_
5.  $\angle 3$  and  $\angle 4$  are \_\_\_\_\_

IF  $l \parallel m$ , give an example of each set of angles (from the image below) **Circle** if the angles would be **congruent** or **supplementary**.

6. Alternate Interior Angles:  $\angle C$  and \_\_\_\_\_ Congruent    Supplementary
7. Alternate Exterior Angle  $\angle H$  and \_\_\_\_\_ Congruent    Supplementary
8. Same Side Interior  $\angle D$  and \_\_\_\_\_ Congruent    Supplementary
9. Same Side Exterior  $\angle B$  and \_\_\_\_\_ Congruent    Supplementary
10. Vertical  $\angle G$  and \_\_\_\_\_ Congruent    Supplementary
11. Corresponding  $\angle F$  and \_\_\_\_\_ Congruent    Supplementary
12. a. Supplementary  $\angle E$  and \_\_\_\_\_ Find two relationships
- b. Supplementary  $\angle E$  and \_\_\_\_\_
13. a. Adjacent  $\angle H$  and \_\_\_\_\_ Find two relationships
- b. Adjacent  $\angle H$  and \_\_\_\_\_
14. Linear Pair  $\angle D$  and \_\_\_\_\_ Congruent    Supplementary

Name the relation of the angles that are marked (Do not just say congruent or supplementary). Then find x, and find ALL angle measures.

Rel: \_\_\_\_\_ x=\_\_\_\_\_ Rel: \_\_\_\_\_ x=\_\_\_\_\_ Rel: \_\_\_\_\_ x=\_\_\_\_\_

18. Given the following **right** triangles, find the **EXACT** missing side lengths. **Simplify** if possible. **No decimals**.

a.

b.

c.

Use the figure to the right below to answer the following questions. In this figure **line  $l$  is parallel to line  $m$  and line  $o$  is perpendicular to line  $m$ . SYW**. Each question is independent from the others.

**Example:** If  $\angle 11$  and  $\angle 13$  are vertical angles (**the relationship**), the angles are **(congruent)**.

(So we know that  $\angle 11$  *must equal*  $\angle 13$ ). If  $\angle 11 = [-3(2x - 5)]^\circ$  and  $\angle 13 = (-14x - 17)^\circ$ .

- What does  $x$  equal? -4
- What is the measure of  $\angle 11$ ?  $39^\circ$
- What is the measure of  $\angle 13$ ?  $39^\circ$

$  \begin{aligned}  -3(2x - 5) &= -14x - 17 \\  -6x + 15 &= -14x - 17 \\  8x &= -32 \\  x &= -4  \end{aligned}  $
---

19. If  $\angle 13$  and  $\angle 14$  are a \_\_\_\_\_ pair, together they = \_\_\_\_\_.

If  $\angle 13 = (s - 2)^\circ$  and  $\angle 14 = (3s + 2)^\circ$

- What does  $s$  equal? \_\_\_\_\_
- What is  $\angle 13$ ? \_\_\_\_\_
- What is  $\angle 14$ ? \_\_\_\_\_

20. If  $\angle 4$  and  $\angle 11$  are \_\_\_\_\_ interior angles, the angles are \_\_\_\_\_.

If  $\angle 4 = [2(4p - 3) - 8]^\circ$  and  $\angle 11 = (4 + 2p)^\circ$ .

- Solve for  $p$ . \_\_\_\_\_
- What is  $\angle 4$ ? \_\_\_\_\_
- What is  $\angle 11$ ? \_\_\_\_\_

21. If  $\angle 13$  and  $\angle 1$  are alternate \_\_\_\_\_ angles, they are \_\_\_\_\_.

If  $\angle 13 = (-1 + 2g)^\circ$  and  $\angle 1 = (5g + 4g - 8)^\circ$

- Solve for  $g$ . \_\_\_\_\_
- What is  $\angle 13$ ? \_\_\_\_\_
- What is  $\angle 1$ ? \_\_\_\_\_

22. If  $\angle 4$  and  $\angle 12$  are \_\_\_\_\_ angles, the angles are \_\_\_\_\_.

If  $\angle 4 = (r - 4)^\circ$  and  $\angle 12 = (3r - 16)^\circ$ .

- Solve for  $r$ . \_\_\_\_\_
- What is  $\angle 4$ ? \_\_\_\_\_
- What is  $\angle 12$ ? \_\_\_\_\_

23. From the figure above, if  $\angle 4 = \angle 5$ , find and explain how do you know.

- $m \angle 1 =$  \_\_\_\_\_  $^\circ$ . HDYK \_\_\_\_\_
- $m \angle 12 =$  \_\_\_\_\_  $^\circ$ . HDYK \_\_\_\_\_
- $m \angle 13 =$  \_\_\_\_\_  $^\circ$ . HDYK \_\_\_\_\_
